

MICROSOFT EXCEL/EXCEL VIEWER CONFIGURATION INSTRUCTIONS FOR NETSCAPE NAVIGATOR

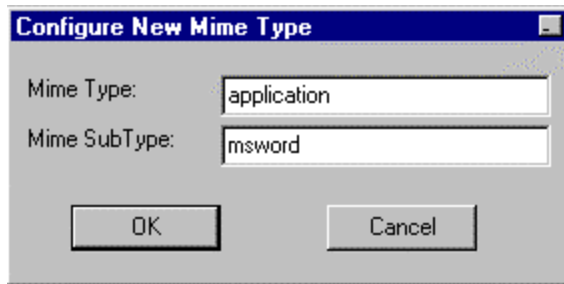

1. From the **Options** menu, choose **General Preferences**.

2. Select the **Helpers** tab.

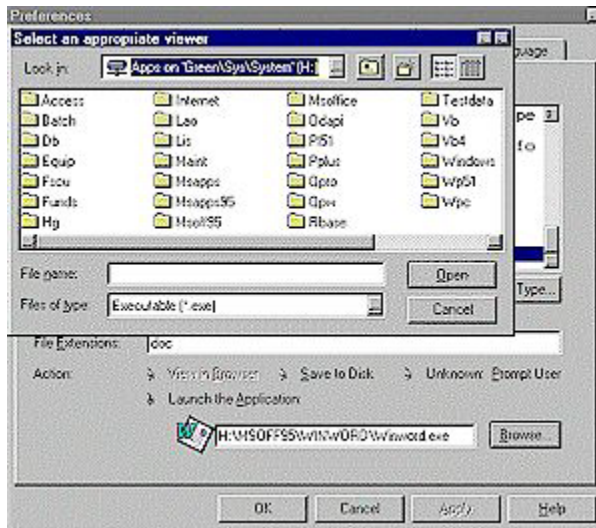

3. Click on the **Create New Type** button.
4. In the **Configure Mime Type** dialog box, type "*application*" in the Mime Type text box. Type "*msexcel*" in the Mime Subtype text box.
5. Choose **OK**.

6. In the File Extensions text box, type "x/s"
7. Select the **"Launch the Application"** option.
8. Click on the **Browse** button. The **"Select an Appropriate Viewer"** box will appear and the file directory will be displayed.

If you have Microsoft Excel installed on your system, browse to the directory and subdirectory that contains the executable command for starting Excel (excel.exe).

If you do not have Microsoft Excel installed AND you downloaded the free Excel Viewer, browse to the directory and subdirectory that contains the Excel Viewer (xlview.exe) program. If you do not have Excel on you system you must [click here](#) and download the free Excel Viewer from Microsoft in order to view this document online (you will find instructions on-line at this site).

9. Once you locate the proper directory, double click on the executable file for the program.
10. The command line for launching the program will appear in the **"Launch the Application"** text box along with its associated icon at the left of the text box. Choose OK to complete the configuration.
